EZ-4002D + EZ-6009E

High-End vinyl precision through mechanical integrity

A serious analogue combination conceived to unite mass, stability, precise tracking and natural musicality.

Selected by Lyric Audio Élite

The analogue ritual

When listening becomes a conscious act again

Vinyl keeps something that digital playback rarely reproduces: gesture. Taking the record out of its sleeve, cleaning its surface, lowering the arm and letting the stylus find the groove turns listening into a simple yet deeply human ceremony. The EIZZ EZ-4002D + EZ-6009E was created precisely for that moment: so music does not merely pass by, but stays with you.

It is not only about spinning a record.

It is about giving time and presence back to music.

EIZZ EZ-4002D

Mass, stability and mechanical silence

The EZ-4002D turntable follows a high-mass architecture and a playback philosophy isolated from external vibrations. Its purpose is clear: less mechanical noise, greater stability and a solid foundation from which the cartridge can retrieve information from the groove with cleanliness and natural ease.

1 Steel platter

Unlike the 4002C with its acrylic platter, the 4002D uses a steel platter for a more solid and controlled presentation.

2 Dual chassis

Floating construction with anti-vibration control to separate playback from external mechanical disturbance.

3 Decoupled motor

The motor works independently, helping to reduce unwanted interference during rotation.

4 Precision bearing

An inverted precision bearing contributes to smooth rotation, stable speed and lower background noise.

The key difference

EZ-4002D: steel platter. EZ-4002C: acrylic platter.

EZ-6009E

A 9-inch S-shaped tonearm designed to track with precision

The EZ-6009E tonearm combines a classic S-shaped geometry with careful construction and noble materials. Its polished chrome-finished brass tube provides structural rigidity and resonance control, while the internal Audio Note 5N OFC wiring preserves a clean and faithful signal path.

- Mirror-finished chrome-plated brass arm tube.
- High-performance internal Audio Note 5N OFC wiring.
- Four 4 mm precision bearings developed specifically for this model.
- Top-mounted dynamic tracking force adjustment.
- Detachable headshell compatible with standard-mount cartridges and SPU-style profiles.

The signal path

From the groove to mechanical silence, and from there to music

The EZ-4002D + EZ-6009E does not aim to colour the sound, but to preserve the stability needed for the record to speak naturally.

Construction and details

What makes an analogue package feel serious

1 Steel platter

Greater mass perception and a more substantial visual presence than the acrylic platter of the 4002C.

2 Floating chassis

Anti-vibration design intended to isolate playback and reduce external resonance.

3 Decoupled motor

Mechanical separation that favours clean and stable rotation.

4 S-shaped tonearm

Classic 9-inch geometry with broad cartridge versatility.

5 Audio Note 5N OFC

Internal oxygen-free copper wiring chosen to preserve signal integrity.

6 VTA & tracking

Fine adjustments to tailor behaviour to each cartridge and system.

Great analogue playback does not depend on one spectacular part alone, but on the sum of mass, geometry, isolation, wiring and fine adjustment.

Key specifications

Highlighted technical data of the complete package

This sheet has been prepared with the confirmed data available for this version of the dossier. Before final publication, it is wise to re-check weight, dimensions and any possible factory variation.

EIZZ EZ-4002D

Type	High-mass turntable
Platter	Steel
Chassis	Floating dual chassis
Control	Anti-vibration system
Motor	Independently decoupled
Bearing	Inverted precision bearing
Package	Includes EZ-6009E arm

EIZZ EZ-6009E

Type	9" S-shaped tonearm
Pivot-spindle	215.6 mm
Effective length	233.12 mm
Overhang	17.5 mm
Offset	31°
Tube	Chrome-plated brass
Wiring	Audio Note 5N OFC
Bearings	4 x 4 mm precision bearings

Selected by Lyric Audio Élite

A serious, musical and intelligently conceived analogue package. Not every product deserves a place in a specialised selection. The EIZZ09E EZ-4002D + EZ-6009E does because it brings together presence, engineering, musicality and a price/performance ratio that is genuinely hard to ignore.

For the enthusiast looking for a truly satisfying turntable without entering absurd price escalation, this package deserves very close attention: it has presence, it has quality, it has sound and, above all, it makes sense.
